ERGONOMIC SURFACING
for fitness centres and gyms

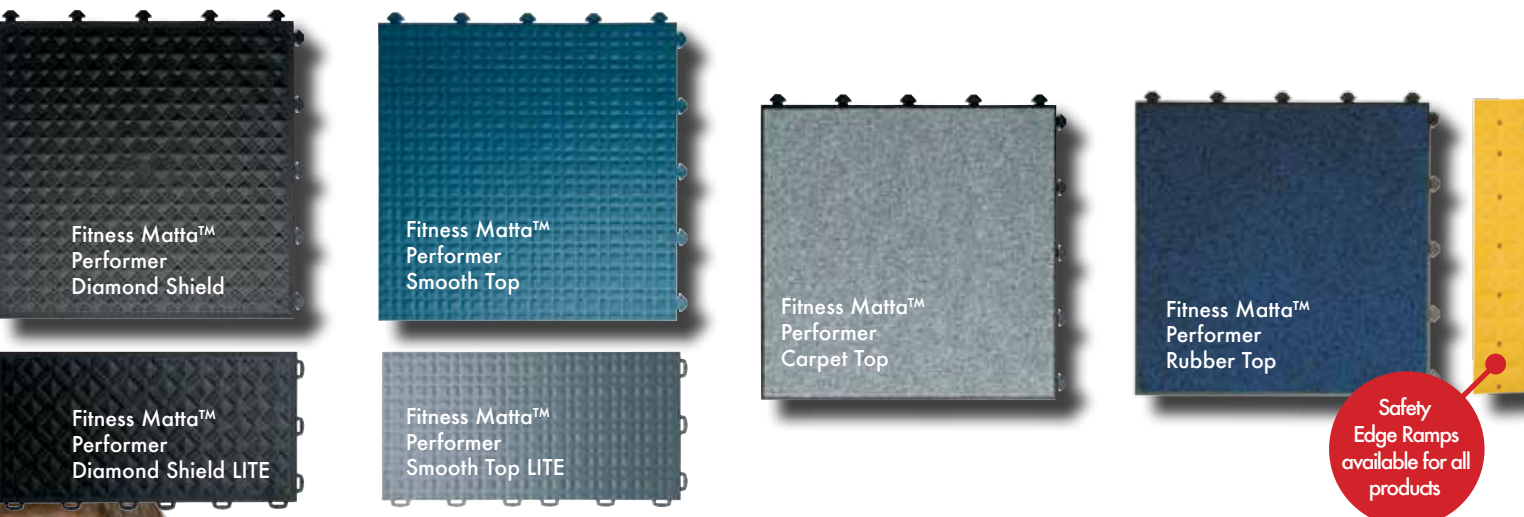

INTRODUCING FITNESS MATTA™ PERFORMER

Interlocking flooring system for gymnasiums and fitness centres

Matta Products is a leader in the innovation, design and manufacture of ergonomic safety surfacing systems for industrial and leisure markets worldwide. Built upon Matta Products' in-depth knowledge of safety surfacing systems, the Fitness Matta™ range has been specifically designed to provide noise reduction properties, ergonomic benefits, and spatial enhancements to fitness centres and gyms. The Fitness Matta™ Performer range contains modular PVC tiles, 25mm or 15mm thick.

PROTECT YOUR FLOOR, EQUIPMENT AND CLIENTS

Ergonomic support is necessary to prevent sports injuries to the lower body. All aerobic activity generates energy, which if not absorbed, is transferred through the body to the ankles, knees, hips and back, increasing the probability of muscle fatigue, and bone and joint problems. Fitness Matta™ provides the perfect balance of cushioning and firmness to ensure lateral foot support and bounce-back, by allowing some compression of the tiles through their tubed base structure.

Shock absorption The continual dropping of heavy weights by gym users can easily damage the under-floor if the matting is not shock absorbent. Should the floor be too rigid, this can also damage free-weights and other equipment being dropped. With the added cushioning of a shock absorbent underlay, Fitness Matta™ completely protects your under-floor.

Fitness Matta's™ tubular base structure provides ergonomic support & shock absorption while allowing for cables to run freely

Safely hides cables Exposed equipment power cables not only clutter a gym's appearance but also pose a trip hazard to its users. The underside of Fitness Matta™ is designed to allow cables to run underneath the tiles without being squashed or damaged.

Slip resistance The textured surface design of the Fitness Matta™ range reduces slippage whilst not hindering movement through excessive grip.

Durable The robust design and materials used ensure Fitness Matta's™ durability in the most testing environments. Fitness Matta™ is manufactured under ISO-certified quality control systems and is backed by Matta's comprehensive 5-year product warranty.

Relocatable Fitness Matta™ tiles are connected together through interlocking lugs. Tiles can be simply disconnected, relocated and reconfigured at any time.

Simple to clean Fitness Matta™ can be vacuumed and/or mopped using regular cleaning products. Heavy duty Matta Res-Q cleaner is available for tough grime and stains.

THE BENEFITS OF FITNESS MATTA™

- Great noise reduction properties – both airborne noise and impact noise
- Ergonomic benefits through unique Compression Column construction
- Power cables and other wiring can be run under the tiles – protected cables and no trip hazards
- Robust injection-moulded construction – great in high traffic areas
- Arrow Lock interlocking system holds the tiles securely together
- Modular design means cabling can be accessed
- Environmental Choice New Zealand certification
- The mats are not inherently flammable and won't support a fire by themselves
- Easy to clean with regular cleaning products, a damp mop and/or vacuum cleaner
- Safety ramp edging for safe transition to other flooring
- Manufactured in New Zealand from recycled plastic under ISO 9001 accreditation
- 5-Year Fitness Matta™ Warranty

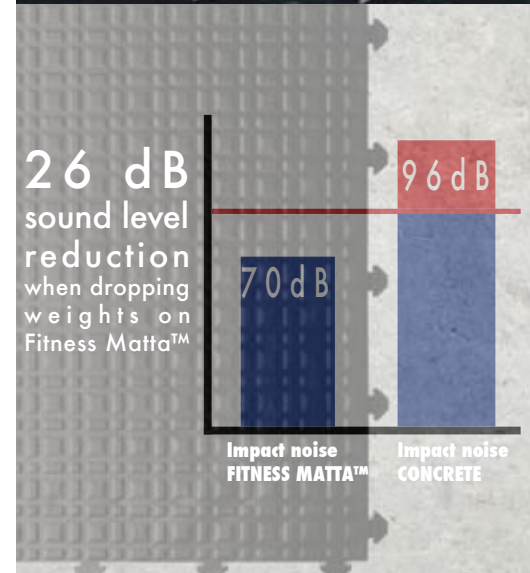

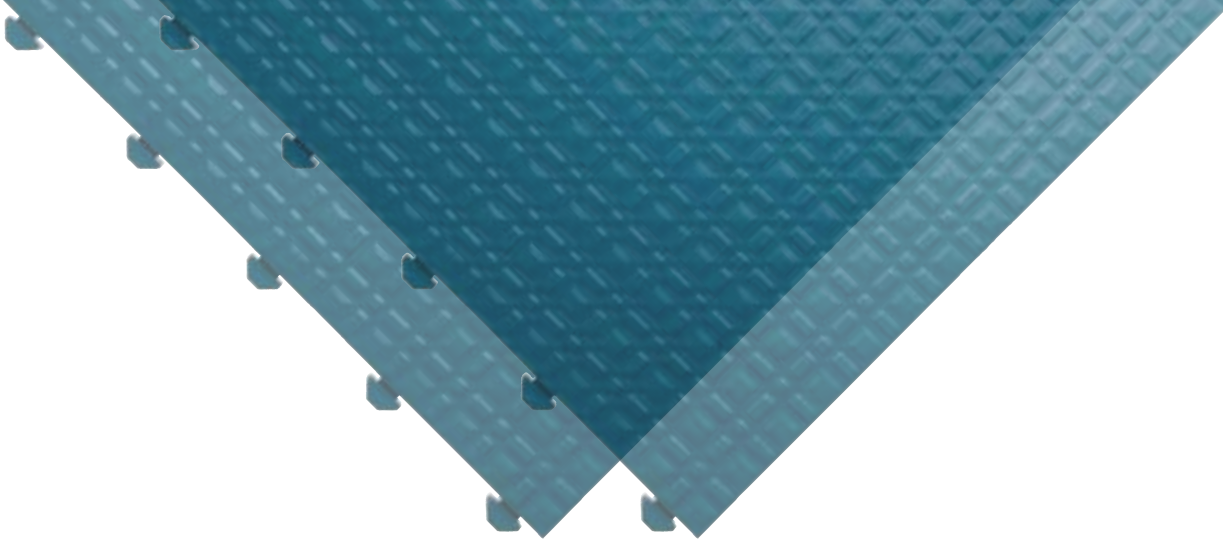

SOUND CONTROL

There are two types of noise that can cause problems for gyms:

Impact noise (such as barbells dropping onto the floor) penetrating to the level below. This type of noise travels readily through the floor, even when floor coverings are used. As displayed in the graph opposite, Fitness Matta™ has been thoroughly tested to provide up to 26 decibels of impact noise reduction.

Airborne noise (such as voices) reverberating around the room and penetrating to neighbouring rooms and the outside world, mainly through walls and windows. Fitness Matta™ Carpet Top dampens the effects of airborne noise through the reduction of reverberation and harsh frequencies, in turn improving your gym user experience.

RECYCLING TECHNOLOGY

Matta Products' Fitness Matta™, Work Matta™ and Play Matta™ products are recognised as being high-quality and durable with proven health and safety benefits; our commitment to recycling also means they are an environmentally responsible choice. Fitness Matta™ is the result of our commitment to providing environmentally sound products for today's work and recreation spaces. We understand the importance of long-term resource sustainability and are determined to promote and expand our significant recycling effort. The rubber and PVC feedstock for our products is 100% recycled - and our products can be recycled in their turn. Fitness Matta™ carries the Environmental Choice New Zealand ecolabel, having met the stringent requirements recognised by the Global Ecolabelling Network.
